

Advantages

- Particularly suitable in applications with frequent slipping
- Better stability of slipping torque than Belleville spring torque limiters over duration of the operating period
- Adjustment of slipping torque setting according to the number of active springs – not through modification of spring pressure

64-1

The RIMOSTAT® Principle

The contact pressure on the friction surfaces is produced by long coil springs. Because of the RIMOSTAT® Torque Limiter's linear, flat-angle characteristic of the pressure force, practically no reduction of the slipping torque occurs even when friction linings are subjected to wear. As the diagram 64-3 shows, compared with Belleville spring torque limiters, assuming a friction wear of Δf the reduction of the slipping torque ΔM is negligible.

Function

64-2

Function

- When the preset slipping torque has been reached the built-in component (e. g. chain wheel) slips
- During the slipping process, input and output rotate relative to each other and the preset slipping torque continues to be transmitted
- Inherent in the slipping process is a high energy consumption
- Re-engagement is not necessary

64-3

¹⁾ The max. speed relates to the design straight of the Torque Limiter; the max. permissible speed differential Δn should be checked according to the heat calculation on page 73.

²⁾ If the part to be coupled is used without bearing bush, the bore should be made to dimension C (tolerance F8).

Keyway as per DIN 6885, page 1 · Tolerance of keyway width P9. Further sizes available on request.

Width of parts to be connected

Components may be connected with either width B_x or B_y.

Supply

Unless requested otherwise, the Torque Limiters are supplied pilot bored, a full complement of springs, without slipping torque setting and without bearing bush. Factory slipping torque setting is only possible when the order includes a finish bore.

Accessories

- Width B_x or B_y bearing bushes
- Standard tools are normally sufficient for adjusting the slipping torque. Only sizes 125 and 160 require a tool adapter which can be ordered from us.

Please specify when ordering

- Type of Torque Limiter
- Diameter d, if finish bore is requested
- Width of bearing bush B_x or B_y
- Slipping torque to be preset, if required

with chain wheel

¹⁾ Check the stress of the keyway in the case of smaller finish bores d₁ and high slipping torques.
Keyway according to DIN 6885, p. 1 - Tolerance of keyway width P9

Application

As slipping shaft coupling to compensate for minor misalignments.

Supply

Unless specified otherwise, the Torque Limiters are supplied with a pilot bore, a full complement of springs and without slipping torque setting. Factory slipping torque setting is only possible when the order includes a finish bore.

Accessories

- Standard tools are normally sufficient for adjusting the slipping torque. Only sizes 125 and 160 require a tool adapter which can be ordered from us.

Please specify when ordering

- Type of Torque Limiting chain coupling
- Diameter d and d₁, if finish bore is requested
- Slipping torque to be preset, if required
